

Box for Mobile

Work anywhere, on any device — with the security you've come to trust from Box

Share, access and work with all your files — and your teams

- Quickly find what you need with intuitive navigation and in-document search
- Share files in seconds and keep them handy with offline access
- Instantly view 100+ file formats without downloading
- Stay up-to-date on progress and feedback with instant notifications

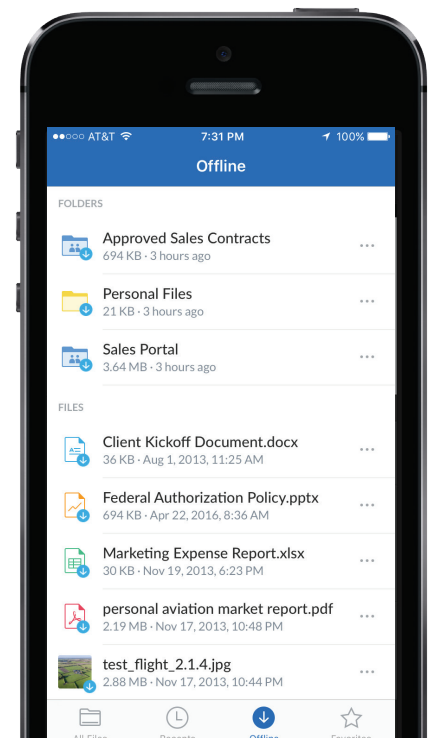

"In today's mobile-first, cloud-first world, providing our employees with secure access to content at any time using any device is critical to creating a more productive, connected workforce," said Jamie Miller, SVP and CIO of GE. "Moving to a cloud technology like Box allows us to centralize all of our content and provides more efficiency, speed and simplicity for our employees."

Work with your favorite apps without leaving Box

- Use integrations with over 1,400 enterprise apps like Office 365, Salesforce, DocuSign and Slack
- Edit Office files right from your device and save all changes back to Box
- Work on both Android and iOS without license requirements, VPN or browser constraints

Box enabled sales reps to get presentations and contracts in front of customers twice as quickly, which meant that contracts were signed, deals were closed and revenue was generated faster than ever before.

Give your teams a mobile experience IT can trust

- Protect data with access permissions for sharing, copying and pasting content
- Remotely log out users and delete Box app data if devices are lost or stolen
- Enforce app passcodes, control offline access and restrict data access in other apps
- Use integrations with leading EMM providers for advanced mobile security and device management

Box solved for the users' external collaboration and mobile access needs while giving IT centralized management and enterprise-grade security. Thanks to Box, Schneider has offloaded their on-premise file servers and cut costs by 30%.
